Problem – Proposed Solution

Core Problem

Citizens across India (especially Bihar) do not get timely, verified & offline information about Central/State schemes, local development works, fund utilisation, elected representatives, ration distribution and grievance status. Data is scattered, outdated and inaccessible in one place.

Proposed Solution: उद्देश – One Nation Civic Data Platform

1. **Unified Hierarchical View**

   India → State → District → Block → Ward dashboard. All schemes, works, funds & representatives in one place.

2. **Only Official Source-Linked Data**

   Every information shows Source + Last Updated Date + Official Link. No rumours, no political rating.

3. **Online + Offline First**

   Full working app without internet. Perfect for rural Bihar and low-connectivity areas across India.

4. **Complete Accountability Loop**

   Schemes + Days Left | Development Works | Fund Tracker | Ration Monitor | Geo-tagged Complaint with Escalation.

Team Udesh

Technical Approach

Technologies & Stack

• Frontend: Flutter (Android/iOS) + PWA – Offline-first with Hive/SQLite

• Backend: NestJS / Node.js + PostgreSQL + PostGIS

• Data Layer: ETL from data.gov.in, State portals, RTI + OCR

• AI Layer: RAG for scheme matching + NLP for complaint routing

• Maps: MapLibre + OpenStreetMap (ward-level view)

• Security: OTP + optional Aadhaar e-KYC, encrypted data

Methodology

1. Hierarchical Geo-Model (State → Ward)
2. Official source connectors + verification
3. Complaint workflow (Submit → Escalate)
4. Offline sync + conflict resolution
5. Bihar Pilot → All States expansion

Links & AI Usage

GitHub: [Add your repo link after push]
Demo Video: [Add YouTube/Drive link]

AI Usage: Scheme recommendation, complaint auto-tagging, document OCR. Core data remains official-source based only.

Team Udesh

Impact Potential

Target Audience Impact

- One-app view of all applicable schemes + days left
- Offline access removes digital divide in rural areas
- Ward-level status of roads, water, electricity, schools
- Real-time complaint tracking with escalation path

Social & Economic Benefits

- Higher scheme uptake & reduced leakage
- Citizens monitor fund utilisation → better delivery
- Faster grievance redressal → increased trust
- Data-driven planning for PRI & local bodies

Key Stakeholders

- Citizens (primary users)
- Mukhiya / Sarpanch / Corporators
- MLAs, MPs, District Administration
- State & Central departments
- NGOs, RTI activists, media

Team Udesh

Feasibility and Risk Analysis

Feasibility

Bihar pilot is highly feasible. Public portals (schemes, e-Shakti, PDS, works), data.gov.in, LGD codes and RTI route already exist. Offline-first Flutter stack is mature. Modular design allows state-by-state expansion. Strong partnership potential with MyGov / Digital India / State IT departments.

Potential Challenges & Risks

- Incomplete or delayed official data
- Varying data quality across states
- Local resistance to transparency
- Privacy concerns on geo-tags
- Multi-language & scale maintenance
- Dependency on government portals

Mitigation Strategies

- Source + timestamp + ‘Data N/A’ flag
- State-wise connectors + human check
- Strict neutrality – only official records
- Consent-based & anonymised geo data
- Open-source core + language packs
- Fallback: PDF/OCR + RTI + verified updates

Team Udesh

Team

Team Composition

Roles

- Product & Domain Lead – Civic architecture, Bihar knowledge, stakeholder mapping
- Full-stack / Mobile Lead – Flutter offline-first app, backend APIs, geo hierarchy
- Data & AI Lead – ETL from official sources, RAG pipeline, complaint NLP, OCR
- Research & Verification – Scheme documentation, RTI process, source authenticity

Challenges Faced

- Collecting complete & updated official data sources
- Designing truly offline hierarchical UI
- Keeping complete political neutrality
- Balancing rich features with rural usability

Our Journey

Started from real experience of Bihar citizens who struggle to get scheme information and track local works. Goal is not another app, but a trusted civic data layer that any state can plug into. Focus: authenticity over flashiness, citizen power over politics.

References

Details / Links of the reference and research work

National Open Data:

data.gov.in – Central repository of government datasets
MyGov.in & Digital India portals – citizen engagement & scheme directories

Bihar Specific Sources:

Bihar Scheme portals, e-Shakti, Bihar PDS, District works monitoring systems, Local Government Directory (LGD) codes

Standards & Frameworks:

National Data Sharing and Accessibility Policy (NDSAP)
Open Government Data Platform India guidelines
Census of India & SECC hierarchical units

Technical Research:

Offline-first architecture (Flutter + local persistence)
RAG + LLM for public service personalisation
Geo-spatial hierarchy modelling with PostGIS

Accountability Models:

Right to Information (RTI) Act workflows
Public Financial Management System (PFMS) concepts
State grievance redressal systems (CPGRAMS equivalents)
